And Testing

Advancing Respiratory Simulation

Since 1993, IngMar Medical's vision has been to help raise the quality of patient care through the use of breathing simulators, lung models, and test lungs. Our products are used worldwide to:

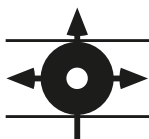

- Develop new respiratory therapy products and treatments.
- Test for quality and safety of respiratory therapy products.
- Train clinicians to achieve the highest level of patient care.

Why are we the leader in breathing simulation?

- IngMar Medical's ASL 5000 is the world's most sophisticated breathing simulator – "the gold standard" – and the only high fidelity neonatal breathing simulator.
- IngMar Medical offers a complete line of lung simulation products developed for specialized applications in research, development, training, testing, and sales.
- We appreciate that each customer's application is unique. From customized products to in-depth orientation, we've built our reputation by providing comprehensive solutions to breathing simulation.

High performance respiratory simulation that raises the level of patient care.

INGMAR MEDICAL
Respiratory Simulation Specialists

ASL 5000 Breathing Simulator

Our highest fidelity simulator can create almost any breath profile - neonatal to adult.

RespiSim® System

Ventilator management training system with training modules developed by leading educators.

RespiPatient®

A high fidelity respiratory patient simulator for comprehensive training.

Curriculum Modules

Plug-and-play training modules save time and ensure consistency.

ASL 5000 Lung Solution

Developed in collaboration with Laerdal for the SimMan® platform.

NeoLung® Infant Test Lung

A unique tool to simulate your tiniest patients.

QuickLung®

Adjustable precision test lung which forms the core of a modular system. Now also in pediatric version.

QuickLung® Breather

This enhanced version of the QuickLung breaths spontaneously.

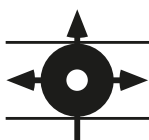

RespiTrainer® Advance

Multi-skill ventilation and airway management trainer with realtime feedback. Also in infant version.

Adult/Pediatric Demo Lung

Adjustable, dual-bellows demo lung with pressure gauges for airway and lungs.

INGMAR MEDICAL

Respiratory Simulation Specialists

ISO 9001:2008 certified and ISO/IEC 17025:2005 accredited.

SimMan® is a registered trademark of Laerdal Medical.
